Software Detail Design (SDD) Document [v1.1]

Software design is the process of defining the architecture, components, interfaces, and other characteristics of a system or component. Detailed design is the process of defining the lower level components, modules and interfaces. The physical model outlined in the early design phase (SRS) is extended to produce a structured set of component specifications that are consistent, coherent and complete. Each specification defines the **functions, inputs, outputs** and internal processing of the component.

Contents of Document

The contents organization of SDD document is as follows:

CHAPTER 1: SCOPE

1.1 System Overview
System background, description and stakeholders.

CHAPTER 2: PRELIMINARY DESIGN

2.1 Contextual Diagram
Describe the entities and data flows involved.

2.2 Data Flow Diagram (DFD) Level 0
The updated DFD Level 0 showing relationships among all processes, entities and data stores involved.

2.3 Process Decomposition
Construct decomposition diagram which lists all the processes involved in hierarchical view (all levels).

CHAPTER 3: DETAILED DESIGN

3.1 Process 1.0: Process Name [Configuration Identification]
a. Pseudocode for (process name)
b. Flow Chart for (process name)
c. Graphic User Interface for (process name)

3.2 Process 2.0: Process Name [Configuration Identification]
a. Pseudocode for (process name)
b. Flow Chart for (process name)
c. Graphic User Interface for (process name)
…. Up to Process n

CHAPTER 4: DATABASE DESIGN

4.1 Entity Relationship Diagram
The updated Entity Relationship Diagram (ERD)

4.2 Data Dictionary
The updated data dictionary table.

CHAPTER 5: GLOSSARY
List all the abbreviation used in the document.
